<body>
<center><h1>NOKIA</h1></center>
<center><img src=
file:///home/stud/Downloads/Nokia_wordmark.svg.png
></center>
<p>Nokia Corporation (natively Nokia Oyj, referred to as Nokia; stylized as
NOKIA)[a] is a Finnish multinational telecommunications, information technology,
and consumer electronics company, founded in 1865. Nokia's main headquarters are
in Espoo, Finland, in the greater Helsinki metropolitan area, but the company's actual
roots are in the Tampere region of Pirkanmaa. In 2020, Nokia employed
approximately 92,000 people across over 100 countries, did business in more than 130
countries, and reported annual revenues of around €23 billion. Nokia is a public
limited company listed on the Helsinki Stock Exchange and New York Stock
Exchange. It is the world's 415th-largest company measured by 2016 revenues
according to the Fortune Global 500, having peaked at 85th place in 2009. It is a
component of the Euro Stoxx 50 stock market index
```

</p>

The company has operated in various industries over the past 150 years. It was founded as a pulp mill and had long been associated with rubber and cables, but since the 1990s has focused on large-scale telecommunications infrastructure, technology development, and licensing.[12] Nokia made significant contributions to the mobile telephony industry, assisting in the development of the GSM, 3G, and LTE standards. For a decade beginning in 1998, Nokia was the largest worldwide vendor of mobile phones

and smartphones. In the later 2000s, however, Nokia suffered from a series of poor management decisions, and soon saw its share of the mobile phone market drop sharply. After a partnership with Microsoft and Nokia's subsequent market struggles</p>

The company was viewed with national pride by Finns, as its mobile phone business made it by far the largest worldwide company and brand from Finland.[27] At its peak in 2000, during the telecoms bubble, Nokia accounted for 4% of the country's GDP, 21% of total exports, and 70% of the Helsinki Stock Exchange market capital.[28][29]</p>

(External css)

EXPERIMENT NO:6**Aim:**

Create a HTML registration form and to validate the form using JavaScript code

Source code

```

<html>
<head>
<script>
function validate(){
var x = document.forms["form1"]["phone"].value;
if(x=="")
{
alert("required phone number");
}
var y = document.forms["form1"]["name"].value;
if(y=="")
{
alert("required a name ");
}
}
</script>
</head>
<body style="border:solid black 2px;"><center>MCA ADMISSION FORM</center>
<form name="form1" method="post" onsubmit="validate()">
<div align="center">
<br>
<label>Name:</label>
<input name="name" size="20" type="text" ><br>
<br>
<br>
<label>MOBILE:</label>
<input name="phone" size="20" type="number" ><br>
<br>
<br>
<div align="center">
<input type="submit" value="SUBMIT">
</div>
<br>
<br>
</form>
<br><br>
</body></html>

```

Output

The following HTML code represents the MCA Admission Form shown in the screenshots:

```

<html>
<head>
<title>MCA ADMISSION FORM</title>
</head>
<body>
<div>
Name: <input type="text" value="gokul"/>
MOBILE: <input type="text"/>
<input type="button" value="SUBMIT"/>
</div>
</body>
</html>

```

The validation error message shown in the second screenshot is:

```

<div>
This page says
required phone number
<input type="button" value="OK"/>
</div>

```

The final state of the form, as shown in the third screenshot, is:

```

<html>
<head>
<title>MCA ADMISSION FORM</title>
</head>
<body>
<div>
Name: <input type="text"/>
MOBILE: <input type="text" value="9947960678"/>
<input type="button" value="SUBMIT"/>
</div>
</body>
</html>

```

The screenshot shows a web browser window with the address bar displaying `/home/stud/gokul%20webp/JS.HTML`. The browser's toolbar includes icons for Apps, Gmail, YouTube, and Maps. A modal dialog box is open, displaying the message "This page says required a name" with an "OK" button. Below the dialog, a text input field is labeled "MOBILE:" and contains the value "9947960678". A "SUBMIT" button is located below the input field. The rest of the page is empty.

EXPERIMENT NO: 7

AIM: Create a HTML page to explain the use of various predefined functions in a string and math objects in JavaScript.

```

EXPERIMENT NO:10

Aim: Compose Electricity bill from user input based on a given tariff using PHP.

Source code

```
<!DOCTYPE html>

<head>
    <title>PHP - Calculate Electricity Bill</title>
</head>

<?php
$result_str = $result = "";
if (isset($_POST['unit-submit'])) {
    $units = $_POST['units'];
    if (!empty($units)) {
        $result = calculate_bill($units);
        $result_str = 'Total amount of ' . $units . ' - ' . $result;
    }
}
/**
 * To calculate electricity bill as per unit cost
 */
function calculate_bill($units) {
    $unit_cost_first = 3.50;
    $unit_cost_second = 4.00;
    $unit_cost_third = 5.20;
    $unit_cost_fourth = 6.50;

    if($units <= 50) {
        $bill = $units * $unit_cost_first;
    }
    else if($units > 50 && $units <= 100) {
        $temp = 50 * $unit_cost_first;
        $remaining_units = $units - 50;
        $bill = $temp + ($remaining_units * $unit_cost_second);
    }
    else if($units > 100 && $units <= 200) {
        $temp = (50 * 3.5) + (100 * $unit_cost_second);
        $remaining_units = $units - 150;
        $bill = $temp + ($remaining_units * $unit_cost_third);
    }
    else {
        $temp = (50 * 3.5) + (100 * $unit_cost_second) + (100 * $unit_cost_third);
        $remaining_units = $units - 250;
        $bill = $temp + ($remaining_units * $unit_cost_fourth);
    }
    return number_format((float)$bill, 2, '.', '');
}
```

```

?>
<body>
  <div id="page-wrap">
    <h1>Php - Calculate Electricity Bill</h1>

    <form action="" method="post" id="quiz-form">
      <input type="number" name="units" id="units" placeholder="Please
enter no. of Units" />
      <input type="submit" name="unit-submit" id="unit-submit"
value="Submit" />
    </form>

    <div>
      <?php echo '<br />' . $result_str; ?>
    </div>
  </div>
</body>
</html>

```

PHP

Output

Php - Calculate Electricity Bill

Total amount of 24 - 84.00

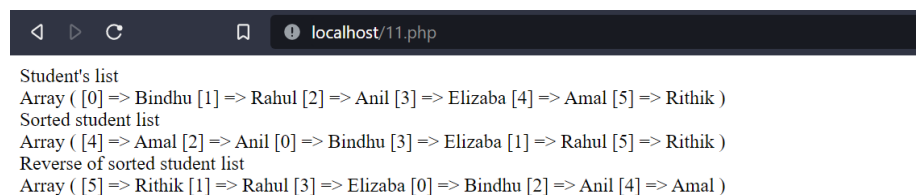

PHP

EXPERIMENT NO:11

Aim: Build a PHP code to store name of students in an array and display it using print_r function. Sort and Display the same using asort & arsort functions.

Source code

```
<?php
$student=array("Bindhu","Rahul","Anil","Elizaba","Amal","Rithik");
echo "Student's list";
echo "<br>";
print_r($student);
echo "<br>";
echo "Sorted student list";
echo "<br>";
asort($student);
print_r($student);
echo "<br>";
echo "Reverse of sorted student list";
echo "<br>";
arsort($student);
print_r($student);
?>
```

Output

```
Student's list
Array ( [0] => Bindhu [1] => Rahul [2] => Anil [3] => Elizaba [4] => Amal [5] => Rithik )
Sorted student list
Array ( [4] => Amal [2] => Anil [0] => Bindhu [3] => Elizaba [1] => Rahul [5] => Rithik )
Reverse of sorted student list
Array ( [5] => Rithik [1] => Rahul [3] => Elizaba [0] => Bindhu [2] => Anil [4] => Amal )
```

EXPERIMENT NO:12

Aim: Build a PHP code to store name of Indian Cricket players in an array and display the same in HTML table.

Source code

```
<html>
<body>
<?php
$Indcricketers= array("Virat Kohli", "M S Dhoni", "Rohit Sharma");
echo "Indian Cricketers: " . $Indcricketers[0] . ", " . $Indcricketers[1] . "
and" . $Indcricketers[2] . "."; echo "<h3>INDIAN
CRICKETERS</h3><table border='1'>
<tr>
<th>NO</th>
<th>NAMES</th>
</tr>
<tr>
<td>1</td>
<td>Virat Kohli</td>
</tr>
<tr>
<td>2</td>
<td>M S Dhoni</td>
</tr>
<tr>
<td>3</td>
<td>Rohit Sharma</td>
</tr>";
?>
Department of Computer Applications
Federal Institute of Science and Technology (FISAT) TM Page no
62
</body>
</html>
```

Output

Indian Cricketers: Virat Kohli, M S Dhoni and Rohit Sharma.

INDIAN CRICKETERS

NO	NAMES
1	Virat Kohli
2	M S Dhoni
3	Rohit Sharma

EXPERIMENT NO:13

Aim: Using PHP and MySQL, develop a program to accept book information viz. Accession number, title, authors, edition and publisher from a web page and store the information in a database and to search for a book with the title specified by the user and to display the search results with proper headings.

Source codeBookinfo.html
